OCAD University

**Access to housing, public spaces, transport, and travel** has economic and social impacts for people with disabilities and for society as a whole. Recently published papers and reports reveal implications for people with a broad range of disabilities, and catalog solutions, strategies, best practices, and resources that have been deployed in the recent past.

Most countries have legal frameworks in place that are designed to ensure built environments are fully accessible for people of all abilities. However, in practice, numerous barriers to accessibility exist. Collaborative, multi-stakeholder global solution networks, leveraging technology for the benefit of all, show promise for accelerating the development of a more accessible world.
